

**BETTER EMISSIONS LLC**  
**ECO SYSTEMS** USA Manufacturer

March 17, 2025

Better Emissions LLC  
1373 County Rd 128  
Floresville, TX 78114

## Company Information

Better Emissions Company, LLC is fully owned by Ben Talamantez, of Floresville, Texas

### **Contact**

Better Emissions Company LLC  
Ben Talamantez  
(210) 842-0703  
ben@betteremissions.com  
www.BetterEmissions.com

### **Product Addressed in this Datasheet**

ECO Systems is a fuel enhancing device.

### **Other Product**

Cobra Clean is a cleaning product that removes carbon deposits and grease.

### **ECO Systems Fuel Enhancer Introduction**

#### **Fuels Supported**

The ECO System is proven to work with gasoline, diesel, natural gas, propane, and other combustible fuels that feed engines or burners.

#### **Our Legacy**

Better Emissions Company is the sole manufacturer of the ECO Systems fuel enhancer, a device proven to reduce diesel particulates, nitrous oxide, carbon monoxide, and other hydrocarbons by providing better combustion. The improved air quality around buses and trucks is immediately noticed by the mechanics who service them, and the general population wherever the ECO System has been deployed.

Everywhere they are installed, the air quality is improved when polluting engines and combustion devices are fitted with the ECO System. Our legacy is cleaner air, and a healthier community – across the globe. For technical examples, see:  
<https://betteremissions.com/eco-research.php>

## **History of the ECO System**

Better Emissions (as ECO Systems, LLC originally) started selling the devices after Ben Talamantez and Clark Daywalt (RIP 1949 - 2024) began the process of bringing the device to market in 2003. Clark handled manufacturing, and Ben handled marketing, sales, and distribution.

After Clark became ill and was no longer able to manufacture them, Better Emissions Company LLC was formed in 2021 to carry on, with Better Emissions having all rights to the intellectual property, as well as continuing with product development.

The ECO System is manufactured in the United States.

## **How it Works**

The device is proven to raise the Reid vapor pressure of the fuel, creating a cleaner burn. Fuel consumption is typically improved by 5% to 20%, and with an increase in engine performance with smoother shifting. See <https://betteremissions.com/eco-research.php>

## **Testing**

Many formal before/after tests have proven the emissions reduction and improved fuel use. The device is proprietary, with a metal tube and copper inserts, protected by patents and trade secrets.

## **Installation**

The ECO System is installed between the fuel filter and the engine, with kits and fittings available to fit most engines, or by connecting the tubes with the appropriate clamps. The device does not require any maintenance, and is warranted for 5 years, but typically lasts longer than the vehicle. Please note that the device is not depending on engine heat to function. Installation does not affect the vehicle warranty, and no engine damage has ever been attributed to the device.

It takes several minutes to install, and minimal tools. A qualified mechanic capable of attaching and detaching fuel lines should do the install. See our website for installation examples.

## **Distribution**

Better Emissions sells and distributes the ECO System throughout the United States, and international sales are via ECO Mines LLC.

Mr. Talamantez and distributors have successfully installed many thousands of units on cars, trucks, 18 wheelers, mining trucks, generators, school buses, police cars, boats, and more. The vehicles immediately experience reductions in soot, regens, regulated emissions, and engine maintenance, as well as reduced fuel consumption.

Intellectual Property

Patents US9644153 and US7942135

Trademark ECO Systems #97559843
